The numerical values on the x-axis of Fig. 3 were labeled incorrectly.[1] The correctly labeled figure is given here.

FIG. 3. Phase diagram of the GCM fluid showing the freezing ($\bigcirc$) and melting lines ($\times$) obtained in this work. The fps ($\triangle$) reported by Prestipino *et al.* (Ref. 12) and freezing thresholds ($\triangledown$) predicted by the Hansen–Verlet rule (Ref. 19) are also illustrated.
